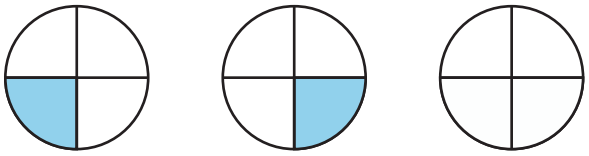
Adding Fractions with Like Denominators

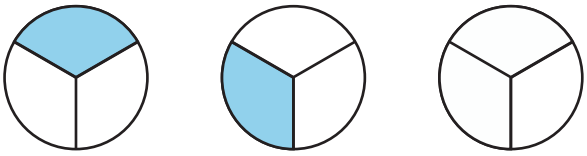
Color in the result, write the matching fractions below the pictures, and solve!

Tip: To add fractions with the same denominator, add their numerators and keep the denominator the same.

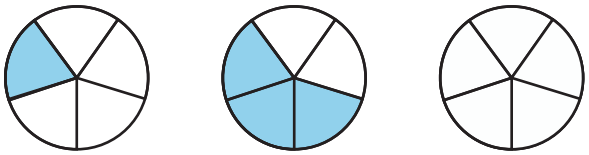
$$\frac{x}{a} + \frac{y}{a} = \frac{x+y}{a}$$



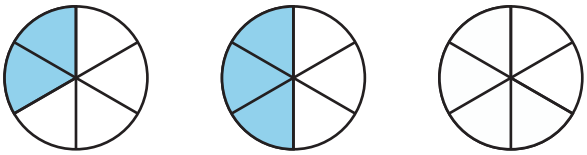
$\frac{1}{4} + \frac{1}{4} = \frac{\quad}{\quad}$



$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

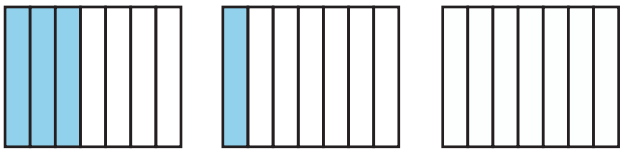


$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

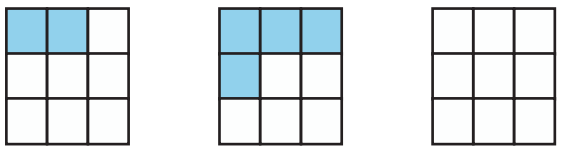


$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

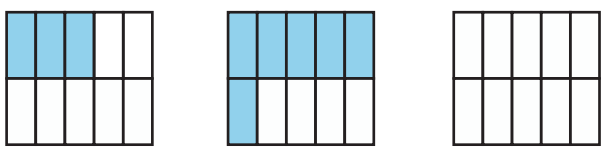
$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$



$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$



$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$



$\frac{\quad}{\quad} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$

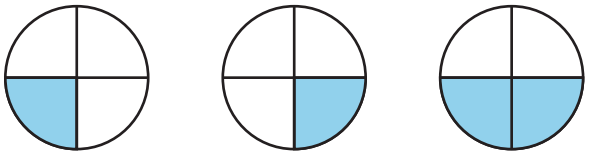
Adding Fractions with Like Denominators

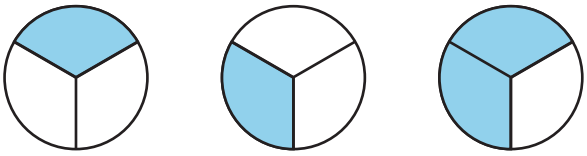
Color in the result, write the matching fractions below the pictures, and solve!

Tip: To add fractions with the same denominator, add their numerators and keep the denominator the same.

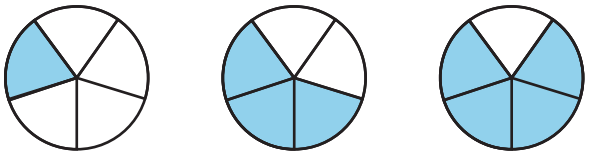
$$\frac{x}{a} + \frac{y}{a} = \frac{x+y}{a}$$



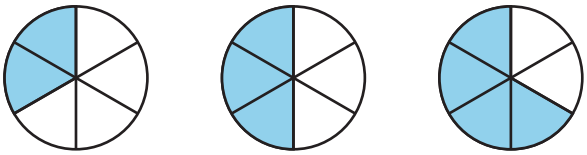
$\frac{1}{4} + \frac{1}{4} = \frac{2}{4}$



$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$

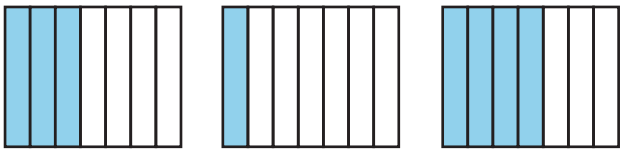


$\frac{1}{5} + \frac{3}{5} = \frac{4}{5}$

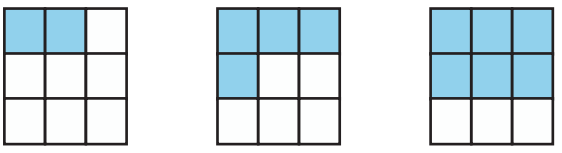


$\frac{2}{6} + \frac{3}{6} = \frac{5}{6}$

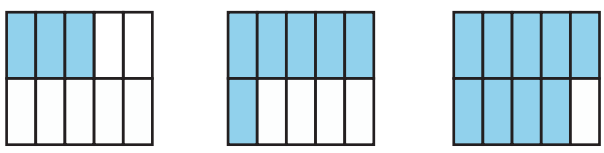
$\frac{3}{8} + \frac{3}{8} = \frac{6}{8}$



$\frac{3}{7} + \frac{1}{7} = \frac{4}{7}$



$\frac{2}{9} + \frac{4}{9} = \frac{6}{9}$



$\frac{3}{10} + \frac{6}{10} = \frac{9}{10}$
