

Birthday

Children love birthday cakes with candles – and balloons too!

It is summer, and one of the four children – Aurora, Ben, Maggie, and Ron – is celebrating their third birthday.

Can you figure out which child has a birthday in August and how old each child is?

1. Aurora is the youngest, and she is two years old.
2. Maggie was born in October, and she is the oldest.
3. Ron is standing on the far left. He is four years old, and he was not born in March.
4. Ben is younger than Ron and older than Aurora, who is standing right next to him.
5. Maggie is one year older than Ron.
6. The child born in January is standing to the left of the three-year-old child.
