

Winter Birthday Party

Children love birthday cakes with candles! It is winter, and one of the four children – Anna, Lucas, Dino, and Olga – is celebrating a birthday today. Can you figure out which child has a birthday in January and how old each child is?

1. Anna is the youngest, and she is 1 year younger than the child born in August.
2. The 8-year-old girl, standing on the far right, was born in September, and she is the oldest child.
3. The 7-year-old boy was not born in April.
4. Dino is younger than Lucas and older than Anna, who is not standing next to him.
5. A girl is standing directly to the left of the child who is celebrating a birthday today.
6. Olga is 3 years older than the youngest child, who has a birthday in spring.
7. The child born in August is standing to the right of the 7-year-old boy.

Anna — April — 5 years old; Lucas — January — 7 years old; Dino — August — 6 years old; Olga — September — 8 years old
