

Dogs

Four neighbors – Caleb, Tina, Ian, and Paula – are all different ages (11, 12, 14, and 16 years old), and each has a different dog (Pug, Beagle, Poodle, or Maltese). Can you figure out which dog belongs to each child?

1. The 16-year-old girl has a Pug.
2. Tina is not the youngest neighbor.
3. Ian has the Beagle, and he is not 16 years old.
4. The 14-year-old walks a Poodle.
5. Caleb is older than Paula, who has the Maltese.
6. The Beagle belongs to the 12-year-old child.

Name	Caleb	Tina	Ian	Paula
